FOREWORD

This *Nostratic Etymological Index* contains all of the Proto-Nostratic roots and their derived verbal and nominal forms cited in the second and third volumes (Part Three: Comparative Vocabulary) of the fifth revised, corrected, and expanded edition of my book *A Comprehensive Introduction to Nostratic Comparative Linguistics* (published on-line under a Creative Commons License [2023]). This Index does not include either the supporting data from the daughter languages or the references. The supporting data can be found in Volumes 2 and 3 of the above book, while the references can be found in Volume 4.

In comparing the lexical material from the various Nostratic daughter languages, I have tried to be very careful about the issue of semantic plausibility. Where there is either a one-to-one or an extremely close semantic correspondence, there is, of course, no problem. Unfortunately, things are not always this straightforward. Quite often, there is not a one-to-one semantic correspondence — in such cases, we must be able to derive the proposed cognates from the postulated ancestor form by widely-attested semantic shifts and not by mere speculation. Therefore, in attempting to determine whether or not particular lexical items from the various language families under consideration might be related, I have made extensive use of Carl Darling Buck's *A Dictionary of Selected Synonyms in the Principal Indo-European Languages* as a control for the semantic development of the proposed lexical parallels, and references to the appropriate sections of this work are given at the end of each proposed Nostratic etymology. It may be noted that, in examining the lexicons of Kartvelian, Afrasian, Uralic-Yukaghir, Elamo-Dravidian, Altaic, and Eskimo-Aleut, semantic shifts similar to those described by Buck for the Indo-European languages are found over and over again in these other language families as well. I cannot emphasize strongly enough that, in order to gain a complete understanding of how I arrived at my proposals, Buck's dictionary must be consulted. However, in a number of instances, where I felt it was warranted due to the wide semantic differences found among the forms cited from the daughter languages, I have given brief explanations within the etymologies themselves.

As valuable as Buck's dictionary is, however, it is not without its shortcomings. In the first place, as noted by Buck himself, the dictionary is not complete — due to the nature of the material involved, Buck and his assistants had to be selective in choosing what to include. Next, the research upon which the dictionary is based is now three-quarters of a century old. Therefore, Buck's dictionary must be supplemented by more recent scholarship. Unfortunately, however, this work is spread throughout so many journal articles, dissertations, and books that it is virtually impossible to consult all of it, especially when one is dealing with multiple language families.

It is not enough, moreover, simply to compare dictionary forms. Rather, when working with the lexical data from the various Nostratic daughter languages, one must strive to ascertain the underlying semantics, that is to say, the fundamental

meaning or meanings from which the full set of semantic nuances are derived, based upon actual usage, wherever this is possible, and one must be cognizant of the interrelationship between social, cultural, and conceptual factors on the one hand and semantic structures on the other. It goes without saying that this is neither a simple nor an easy undertaking.

The approach that I have followed thus leads to the establishment of what may be called “families of words” in the tradition of the great Indo-European comparative dictionaries such as Pokorny and Walde. The starting point is always the reconstructed Nostratic forms. The material cited from the individual Nostratic daughter languages is then to be judged primarily by whether or not it can be convincingly derived from the antecedent Nostratic forms either directly or through widely-attested semantic shifts.

The difficulties involved in dealing with semantic change in unattested languages have been clearly articulated by Werner Winter:

The difficulties encountered by the etymologist reaching out toward unattested and hence textless languages are deep-rooted and virtually insurmountable. When one reads an intelligently written, richly documented book such as Blank 1997, one cannot help being impressed with the fact that it is relatively easy to describe and classify semantic changes such as metonymy and metaphor that occurred in the course of the history of an individual language or a group of closely related languages, but that there is a near total absence of what one might call determinacy and hence predictability as to the kind and direction of the changes that can be shown to have taken place and therefore can be expected to occur again under comparable circumstances. The applicability of a form may remain unchanged, it may be extended to cover additional meaning configurations, it may be narrowed, it may be eliminated altogether; new denotations added may concern closely related items, as in the case of metonymy, or seemingly very different ones, as when metaphors are used. As long as one limits oneself to a retrospective analysis of data from historically well-attested languages, the lack of regularity will not affect the descriptive adequacy of one’s findings; if, however, one turns to the study of prehistoric stages of a language or a group of languages, one is left with hardly any well-defined criteria by which to evaluate one’s hypotheses (and those of others). The only criterion that seems to be operationally usable derives from the assumption made above: if both phonetic and semantic change occurred in relatively small steps, feature by feature, component by component, then the likelihood that a hypothesis might be correct can be said to be supported in a more than subjective way. This does not eliminate the difficulty that observable change can occur in all possible directions and that to complicate matters even further, in the course of a historical development, the direction may change at any time. If that is the case, it follows that in the absence of observable data — that is, under conditions normal for reconstructional linguists — no objectifiable criteria can be called upon by the etymologist, and his proposals will always reflect his personal preferences.

Another important point that needs to be reiterated concerns how I segment the reconstructed forms I am dealing with. Comparison of the various Nostratic daughter languages indicates that the rules governing the structural patterning of roots and stems in Proto-Nostratic were most likely as follows:

1. There were no initial vowels in Proto-Nostratic. Therefore, every root began with a consonant.
2. There were no initial consonant clusters either. Consequently, every root began with one and only one consonant. Medial clusters were permitted, however.
3. Two basic root types existed: (A) **CV* and (B) **CVC*, where *C* = any non-syllabic, and *V* = any vowel. Permissible root forms coincided exactly with these two syllable types.
4. A stem could either be identical with a root or it could consist of a root plus a single derivational morpheme added as a suffix to the root: **CVC+C-*. Any consonant could serve as a suffix. Note: In nominal stems, this derivational suffix was added directly to the root: **CVC+C-*. In verbal stems, it was added after the formative vowel: **CVC+V_{FV}+C-*. (FV = formative vowel.)
5. A stem could thus assume any one of the following shapes: (A) **CV-*, (B) **CVC-*, (C) **CVC+C-*, or (D) (reduplicated) **CVC-CVC-*. As in Proto-Altaic, the undifferentiated stems were real forms in themselves and could be used without additional suffixes or grammatical endings. However, when so used, a vowel had to be added to the stem: (A) **CV-* > **CV* (no change), (B) **CVC-* > **CVC+V*, (C) **CVC+C-* > **CVC+C+V*, or (D) (reduplicated) **CVC-CVC-* > **CVC-CVC+V*. Following Afrasian terminology, this vowel may be called a “terminal vowel” (TV). Not only did terminal vowels exist in Proto-Afrasian, they are also found in Dravidian, where they are called “enunciative vowels”, and in Elamite, where they are called “thematic vowels”. In Proto-Dravidian, the enunciative vowel was only required in stems ending in obstruents, which could not occur in final position.

The original root structure patterning was maintained longer in Afrasian, Dravidian, and Altaic than in the other branches, while the patterning found in Proto-Indo-European and Proto-Kartvelian has been modified by developments specific to each of these branches. The root structure constraints found in Proto-Indo-European were an innovation. In Proto-Uralic, the rule requiring that all words end in a vowel was an innovation and arose from the incorporation of the so-called “terminal vowel” into the stem. It should be mentioned here that reduplication was a widespread phenomenon.

On the basis of the evidence of Proto-Indo-European, Proto-Kartvelian, Proto-Afrasian, Proto-Dravidian, and Proto-Altaic, it may be assumed that there were three fundamental stem types: (A) verbal stems, (B) nominal (and adjectival) stems, and (C) pronominal and indeclinable stems. Some stems were exclusively nominal. In the majority of cases, however, both verbal stems and nominal stems could be built from the same root. In Proto-Nostratic, only pronominal and indeclinable

stems could end in a vowel. Verbal and nominal stems, on the other hand, had to end in a consonant, though, as noted above, when the undifferentiated stems were used as real words in themselves, a “terminal vowel” had to be added to the stem. As explained in Chapter 17 of my book, the terminal vowels were morphologically significant (as were the “formative vowels”).

The reconstructed forms for each proto-language conform to a uniform method of transcription — deviations from traditional transcriptions are explained in the chapters on phonology (volume 1 of my book). The works cited at the end of each entry always give the traditional reconstructions, as written by the individual authors cited. In the case of Proto-Uralic and Proto-Finno-Ugrian, I have kept the symbol /ɜ/, which is traditionally used in Uralic studies as a cover symbol to indicate a vowel of unknown quality.

In the case of both Uralic and Altaic, a certain amount of standardization has been done in the transcription of the forms cited from the individual daughter languages. For Altaic, the system of transcription is close to that used in Starostin—Dybo—Mudrak’s 2003 *An Etymological Dictionary of Altaic Languages*, though, occasionally, Poppe’s transcription is used instead. In both cases, I have allowed a certain degree of latitude due to the wide variations found in the literature.

Inasmuch as the Proto-Indo-European reconstructions included in this book are in accordance with the glottalic model of Indo-European consonantism proposed by Thomas V. Gamkrelidze, Vjačeslav V. Ivanov, and Paul J. Hopper (see Chapter 3 of my book for details), traditional reconstructions are also given for comparison at the end of each Indo-European etymology as part of the references.

It must also be noted that I have been selective in the forms cited from the various Nostratic daughter languages. My goal has been to give a representative sampling, in part to illustrate the semantics involved, and not to cite all known cognates — nonetheless, the documentation is quite extensive. For additional information, the works cited at the end of each etymology should be consulted, as should other works listed in the references but not necessarily cited after individual etymologies.

Even though I have made extensive use of the works of other scholars (especially V. M. Illič-Svityč, A. Dolgopolsky, and V. Blažek) doing research on the comparative vocabulary of the Nostratic languages, I have sometimes purposely excluded material that they have cited. This does not necessarily mean that I reject their suggestions (though in many cases it does). Rather, I have endeavored to verify all of the data cited by other scholars on the basis of works available to me. In those cases where I have been unable to verify the data cited, I have usually not included their proposals. In those cases where I have included data that I was not able to verify, I have added comments to that effect. The major exception to this rule involves the Chadic data cited by Orël—Stolbova in their joint *Afrasian etymological dictionary* (1995), most of which I have not been able to verify independently. Finally, in those instances where I have intentionally rejected, either fully or in part, the proposals made by others, I have not given references to their

work nor have I discussed the reasons for rejection (almost always because the semantics are not plausible and/or because there are problems with the phonology).

Proto-Nostratic verbs are cited in their root/stem form, nouns in the “*status indeterminatus*” form (that is, **-a*) (see Chapter 17 of my book for details).

Adjectives did not exist as an independent grammatical category in Proto-Nostratic. Intransitive verbs could function as “adjectives”. Also, “adjectives” were differentiated from nouns mainly by syntactical means — a noun placed before another noun functioned as an attribute to the latter. To illustrate the different semantic functions of nominal words, Proto-Nostratic **bar-a* could mean: (n) ‘goodness, kindness’; (adj.) ‘good, kind’; (adv.) ‘goodly, kindly, well’.

				Eurasianic			
Proto-Nostratic	Proto-Afrasian	Proto-Dravid.	Proto-Kartvel.	Proto-IE	Proto-Uralic	Proto-Altaic	Proto-Eskimo
ʔ-	ʔ-	Ø-	Ø-	ʔ-	Ø-	Ø-	Ø-
-ʔ-	-ʔ-	-Ø-	-Ø-	-ʔ-	-Ø-	-Ø-	-Ø-

626. Proto-Nostratic 1st singular personal pronoun stem *ʔa- (~ *ʔə-), *ʔi- (~ *ʔe-) ‘I, me’

No doubt originally the same as the deictic particles *ʔa-, *ʔi- listed below.

Note: The Chukchi forms support the view that we are dealing with what was originally a deictic particle here inasmuch as the same patterning is found in both the first and second person predicative pronoun stems. Moreover, it is the proximate deictic form *ʔi- (~ *ʔe-) that is represented in Chukchi-Kamchatkan as opposed to the distant form *ʔa- (~ *ʔə-) found in Afrasian (the Proto-Indo-European forms *ʔe+kʰ-, *ʔe+gʰ-, and *ʔe+kʰ- are phonologically ambiguous). This seems to indicate that independent developments were involved in each branch, using the same basic elements.

627. Proto-Nostratic demonstrative stems (originally deictic particles):
Proximate: *ʔi- (~ *ʔe-) ‘this’;
Intermediate: *ʔu- (~ *ʔo-) ‘that’;
Distant: *ʔa- (~ *ʔə-) ‘that yonder, that over there’

Note: These stems often combined with other deictic particles: *ʔa/i/u+na-, *ʔa/i/u+ša-, *ʔa/i/u+ma-, *ʔa/i/u+ɬa-, *ʔa/i/u+kʰa-, *ʔa/i/u+ya-, etc.

 (n.) **ʔow*-*h*-*a* ‘egg’

Dolgopolsky has proposed a very attractive etymology here. However, it must be noted that Arabic *ʔāḥ* ‘eggwhite, albumen’ is isolated within Semitic. Moreover, even though the Proto-Indo-European form is traditionally reconstructed as **ōu̯iom* ‘egg’, no single reconstruction can account for all of the forms found in the Indo-European daughter languages. Accordingly, there are difficulties with this etymology. If this is a valid etymology, it would imply that the Proto-Indo-European form is to be reconstructed as **ʔ₂ou̯ʔ₂iom* ‘egg’, with short vowel in the first syllable and a laryngeal (**ʔ₂* [= **h̥*]) between **u̯* and **i* (the long vowel found in the first syllable of the forms attested in several of the Indo-European daughter languages would then be due to compensatory lengthening following the loss of this laryngeal). There may have been a non-apophonic **o* (original, or inherited, **o*) in the first syllable, in which case the Proto-Nostratic form would have been **ʔow*-*h*-. Reconstructing a medial laryngeal (**ʔ₂* [= **h̥*]) would also account for the Germanic developments. **ʔowh̥-yo-m* (traditional **ʔ₂ou̯ʔ₂iom*) ‘egg’ cannot, as is often assumed, be a derivative of the common Proto-Indo-European word for ‘bird’, which requires an initial *a*-coloring laryngeal (preserved in Armenian): **Aéw-i-s* [**Aáw-i-s*], **Aw-éy-s* > Armenian *hav* ‘bird, hen, chicken’; Latin *avis* ‘a bird’; Umbrian (acc.) *avif* ‘bird’; Sanskrit (nom. sg.) *vī-h*, (Rigveda) *vé-h* ‘a bird’; etc.
